

METHOD AND SYSTEM FOR PUBLIC FACILITIES ON-LINE RESERVATION

ABSTRACT OF THE INVENTION

An on-line reservation method, storage medium with computer program and system for making a reservation for public facilities. A server is composed of a processor for performing a reservation transaction on public facilities by executing a program stored in a storage media. The staff log-in information, the operating instructions and approved reservation records of the public facilities are stored in the storage media connected to the processor. A client, being the terminal equipment, is used by the staff to connect the server by a network for submitting a reservation request for public facilities. Before making a reservation of the public facilities, an applicant checks the operating instructions and the approved reservation records. Then a reservation with a proper time span is requested, the server will transact the reservation as a new approved reservation record and store it in the storage media or show a suggested reservation time span for the applicant to modify his/her non-approved reservation request. Finally, the server will send an approved reservation notice to the applicant and notify the other relevant participators of this reservation application.
